maintenance  
of  
Sektor Partition Systems**

# Sektor Partitions

## Repair, Cleaning and Maintenance of Sektor Partition Systems – General

### 1) All polyester powder painted and PVC sections, polished metal items and laminate facings.

Cleaning: Abrasive cleaners should not be used.  
An occasional wipe using a mild detergent solution, rinse with a clean damp cloth (over-wetting should be avoided), and then buff with a clean dry cloth.  
Cleaning liquids should be wiped away completely or staining may appear on adjacent surfaces.

Repair:

Superficial damage - painted items can be re-painted with touch-up paint, other items no treatment possible.

Substantial damage - replace component.

### 2) Wood and veneered surfaces.

Cleaning: As for painted components, but an occasional light application of wax polish should be used.

Repair:

Superficial damage - fill with appropriate filler and re-polish.

Substantial damage - replace component.

### 3) Panel facings.

Cleaning: See manufacturers' instructions for individual types. Some fabric materials may shrink if liquid cleaners are used.

Repair:

Superficial damage - painted surfaces should be filled with appropriate filler, sanded smooth and re-painted. Vinyl finishes should be filled as above and re-fix or patch vinyl with a PVA based adhesive.

Substantial damage - necessitates whole panel replacement.

### 4) Glass surfaces.

Cleaning: Clean as for any glass surface, avoiding abrasive materials, and avoiding the use of excessive amounts of water so that surrounding framework is not allowed to become wet. Cleaning liquids should be wiped away completely or staining may appear on adjacent surfaces.

Repair:

Superficial damage - no repair possible.

Substantial damage - replace component.

### 5) Moving parts.

Maintenance: Hinges require no maintenance, lock mechanisms should be lightly oiled during use as required with any excess lubricant wiped away, closers should be adjusted as required.

Repair: Damage to hinges, lock mechanisms, ironmongery or door closers will necessitate replacement.

### 6) Electrical.

Care should be taken when cleaning with liquids in close proximity to electrical switchgear or outlets to avoid contact. Servicing should only be carried out by a qualified electrician.
